

Curriculum for the Master of Chinese Medicine Program

(Students with prior knowledge in western medicine)

All courses in the program will be taught in English. The teaching faculty is made up of a team of experts holding senior professional titles and doctoral degrees, with academic integrity, a good command of the English language and rich experience in teaching international students. The Master's program adopts a variety of teaching methods, such as classroom teaching, online learning, tasks and skills training. The curriculum structure takes into full consideration the learning characteristics and the comprehension of Chinese medicine of international students and is planned to be progressive in nature. Not only will students gain a firm grounding in traditional Chinese medicine knowledge, they will also be inspired by the academic thoughts of famous Chinese physicians and the Chinese traditional culture.
